

Speedgoat Systems Network Security Appliances (with caching)

Overview:

Speedgoat Systems Network Security Appliances provide a robust solution at the edge of a client network to efficiently and securely utilize Internet connections and improve the user experience. The Security Appliance includes Speedgoat Systems standard firewall software as well as standard caching software and storage.

Over 80% of the websites on the Internet utilize SSL (https) and the number is growing every day. Speedgoat Systems appliances utilize full SSL DPI decryption and encryption to cache more content than our competitors' appliances resulting in a more efficient and secure use of Internet connections.

This decryption and encryption capacity on our base security systems enable the addition of advanced software at any time after initial installation and configuration.

Caching and Security in one appliance:

Prior to the creation of Speedgoat appliances, network caching and security were typically provided by separate caching servers and firewalls. Speedgoat is disrupting both the firewall industry and caching industry by providing appliances with this combined functionality.

Speedgoat Systems Caching Appliances with Security and Security Appliances with Caching are built with the same software and hardware for improved support, maintenance, and maximized performance per dollar spent. Speedgoat Appliance model numbers end in C (Security Appliance with Caching) and CE (Caching Appliance with Security) for marketing purposes only. There is no difference in the capabilities and functionality of these devices. Caching may be enabled or disabled in Security Appliances AND Security (Firewall) capabilities can be enabled or disabled in Caching Appliances.

3 Year Warranty and Technical Support Included:

All Speedgoat Systems appliances include a 3yr hardware/software warranty, available firmware and bugfix upgrades, plus 3yrs of telephone technical support. Basic technical support licenses (valid for 12 months) are available for purchase after the initial 12-month term.

Built for Education and E-Rate:

Although Speedgoat Systems appliances are deployed in commercial networks, the appliances and standard software packages were created specifically based on the needs of schools and libraries. Speedgoat appliance were designed with key firewall, switching, routing, and caching features found in other 100% E-Rate eligible appliances on the market. Additional E-Rate ineligible Advanced Security Software can be added to a Speedgoat Systems appliance outside of the E-Rate program.

Speedgoat Systems appliance and standard software features/capabilities have been compared with other E-Rate "firewall" and "caching server" manufacturers selected by hundreds of applicants to ensure eligibility.

Unbundling Advantage:

Speedgoat Systems decided to price all of our services (configuration / installation) and Advanced Software based on the cost of each component. Most manufacturers price their bundles based on the cost of the individual components and then penalize customers for purchasing the individual components OR don't offer the individual components at all. By pricing components individually, Speedgoat Systems customers save significantly because they buy the components they need and can add additional components when they need them.

Security Appliance with Caching - Competitor Comparison

	Speedgoat Systems	Cisco-Meraki MX Firewalls	FortiNet FortiGate	SonicWall NSA	Appliansys Cachebox
Stateful & NextGen Firewall	✓	✓	✓	✓	(None) Caching only

Available Standard Services:

SG-BAS-CONFIG: Remote configuration assistance by Speedgoat Systems engineers and technicians. Billed hourly.

SG-BAS-INSTALL: On-Site physical installation assistance. Billed hourly.

1yr Basic Maintenance Service is available 36 months following purchase of the Speedgoat Appliance.

Available Advanced Software & Services:

Advanced Software (Filtering, Anti-Virus, Anti-Malware, IDS/IPS) and related configuration, installation and maintenance services are available separately for the above appliances or compatible firewalls from other manufacturers. See more information at speedgoatsystems.com/
